

## Get Free PDF Microsoft 70-414 Braindumps From Braindump2go - Guarantee 100% Pass 70-414 Exam(51-60)

QUESTION 51 You are planning the deployment of System Center 2012 Virtual Machine Manager (VMM). You need to identify which additional System Center 2012 product is required to meet the visualization requirements. What should you include in the recommendation? A. Service Manager B. Operations Manager C. Configuration Manager D. App Controller Answer: B

Explanation: System Center 2012 – Operations Manager provides infrastructure monitoring that is flexible and cost-effective, helps ensure the predictable performance and availability of your applications and services, and provides real-time monitoring for your datacenter and cloud, both private and public.

Business Requirements	Technical Requirements	Virtualization Requirements
		The company identifies the following virtualization requirements: <ul style="list-style-type: none"><li>- Minimize the number of permissions and privileges assigned to users.</li><li>- Ensure that the members of a group named Group2 can add a WSUS server to the fabric.</li><li>- Ensure that a diagram view of the virtualization environment can be generated dynamically.</li><li>- Minimize the amount of administrative effort required to manage the virtualization environment.</li><li>- Prevent the failure of a front-end web server from affecting the availability of the CRM application.</li><li>- Ensure that the members of a group named Group1 can create new virtual machines in the Los Angeles office.</li><li>- Only create virtual machine templates by using objects that already exist in the System Center 2012 Virtual Machine Manager (VMM) library.</li><li>- On the failover cluster in the main office, apply limited distribution release (LDR) updates to the virtualization hosts without disrupting the virtual machines hosted on the virtualization hosts.</li></ul>

<http://technet.microsoft.com/en-us/library/jj656649.aspx> QUESTION 52 You need to recommend a solution for updating the virtualization hosts. The solution must meet the visualization requirements. What should you include in the recommendation? A. Cluster-Aware Updating B. WSUS C. System Center Updates Publisher 2011 D. System Center 2012 Configuration Manager Answer: A Explanation:

Business Requirements	Technical Requirements	Virtualization Requirements	All
		The company identifies the following virtualization requirements: <ul style="list-style-type: none"><li>- Minimize the number of permissions and privileges assigned to users.</li><li>- Ensure that the members of a group named Group2 can add a WSUS server to the fabric.</li><li>- Ensure that a diagram view of the virtualization environment can be generated dynamically.</li><li>- Minimize the amount of administrative effort required to manage the virtualization environment.</li><li>- Prevent the failure of a front-end web server from affecting the availability of the CRM application.</li><li>- Ensure that the members of a group named Group1 can create new virtual machines in the Los Angeles office only.</li><li>- Only create virtual machine templates by using objects that already exist in the System Center 2012 Virtual Machine Manager (VMM) library.</li><li>- On the failover cluster in the main office, apply limited distribution release (LDR) updates to the virtualization hosts without disrupting the virtual machines hosted on the virtualization hosts.</li></ul>	

### Cluster-Aware Updating Overview

2 out of 2 rated this helpful - Rate this topic

Published: February 29, 2012

Updated: August 15, 2012

Applies To: Windows Server 2012

This topic provides an overview of Cluster-Aware Updating (CAU), a new feature for failover clusters in Windows Server 2012 that automates the software updating process on clustered servers while maintaining availability. It describes scenarios and applications for using CAU, and provides links to content that details how to integrate CAU into other IT automation and management processes.

<http://technet.microsoft.com/en-us/magazine/ee677580.aspx> QUESTION 53 You need to ensure that Group1 can perform the required tasks. The solution must meet the visualization requirements. What should you create? A. A collection B. A host group C. An organizational unit (OU) D. A site Answer: B Explanation:

Business Requirements	Technical Requirements	Virtualization Requirements	All
		The company identifies the following virtualization requirements: <ul style="list-style-type: none"><li>- Minimize the number of permissions and privileges assigned to users.</li><li>- Ensure that the members of a group named Group2 can add a WSUS server to the fabric.</li><li>- Ensure that a diagram view of the virtualization environment can be generated dynamically.</li><li>- Minimize the amount of administrative effort required to manage the virtualization environment.</li><li>- Prevent the failure of a front-end web server from affecting the availability of the CRM application.</li><li>- Ensure that the members of a group named Group1 can create new virtual machines in the Los Angeles office only.</li><li>- Only create virtual machine templates by using objects that already exist in the System Center 2012 Virtual Machine Manager (VMM) library.</li><li>- On the failover cluster in the main office, apply limited distribution release (LDR) updates to the virtualization hosts without disrupting the virtual machines hosted on the virtualization hosts.</li></ul>	

Applies To: System Center 2012 - Virtual Machine Manager, System Center 2012 SP1 - Virtual Machine Manager

[This topic is pre-release documentation and is subject to change in future releases. Blank topics are included as placeholders.]

The procedures in this section describe how to create a host group structure in System Center 2012 – Virtual Machine Manager (VMM), and how to configure host group properties. You can use host groups to group virtual machine hosts in meaningful ways, often based on physical site location and resource allocation. When you design a host group structure, consider the following:

<http://technet.microsoft.com/en-us/library/gg610645.aspx> QUESTION 54 You need to recommend a solution for managing updates. The solution must meet the technical requirements. What should you include in the recommendation? A. A System Center 2012 Configuration Manager management point in the main office and a System Center 2012 Configuration Manager distribution point in each office. B. A System Center 2012 Configuration Manager management point in the main office and a WSUS downstream server in each office. C. A System Center 2012 Configuration Manager software update point in the main office and a System

Center 2012 Configuration Manager distribution point in each office. D. A WSUS upstream server in and a WSUS downstream server in each office. Answer: C Explanation:

Business Requirements	Technical Requirements	Virtualization Requirements	All
The company identifies the following technical requirements: <ul style="list-style-type: none"> <li>Provide a highly available DHCP solution.</li> <li>Maintain a central database that contains the security events from all of the servers. The database must be encrypted.</li> <li>Ensure that an administrator in the main office can manage the approval of Windows updates and updates to third-party applications for all of the users.</li> <li>Ensure that all of the domain controllers have the ReliableTimeSource registry value in HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\W32Time\Parameters set to 1, even if an administrator changes that value manually.</li> </ul>			

Overview	Existing Environment Network Infrastructure	Current Issues	Planned Changes
The company plans to implement the following changes: <ul style="list-style-type: none"> <li>Replace all of the domain controllers with new servers that run Windows Server 2012.</li> <li>Upgrade the CRM application to use a web-based application that connects to the current CRM database.</li> <li>The web application will store session data in the memory of each web server.</li> <li>Initially, deploy two front-end web servers to two virtual machines. Additional virtual web servers will be deployed in the future.</li> <li>Monitor the availability of the CRM application and create alerts when the overall availability is less than 99 percent.</li> <li>Implement Microsoft System Center 2012 to manage the new environment.</li> </ul>			
Distribution point	A site system role that contains source files for clients to download, such as application content, software packages, software updates, operating system images, and boot images.		

<http://technet.microsoft.com/en-US/library/gg682106.aspx> QUESTION 55 You need to recommend an automated remediation solution for the ReliableTimeSource registry value. The solution must meet the technical requirements. What should you include in the recommendation? A. A System Center 2102 Configuration Manager configuration baseline. B. A System Center 2012 Operations Manager performance counter rule. C. A System Center 2012 Configuration Manager maintenance task. D. A System Center 2012 Operations Manager event rule. Answer: A Explanation:

Business Requirements	Technical Requirements	Virtualization Requirements	All
The company identifies the following technical requirements: <ul style="list-style-type: none"> <li>Provide a highly available DHCP solution.</li> <li>Maintain a central database that contains the security events from all of the servers. The database must be encrypted.</li> <li>Ensure that an administrator in the main office can manage the approval of Windows updates and updates to third-party applications for all of the users.</li> <li>Ensure that all of the domain controllers have the ReliableTimeSource registry value in HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\W32Time\Parameters set to 1, even if an administrator changes that value manually.</li> </ul>			
<ul style="list-style-type: none"> <li>View configuration baselines that have been deployed to the client, initiate compliance evaluation, and view compliance reports.</li> </ul>			

<http://technet.microsoft.com/en-US/library/gg682106.aspx> QUESTION 56 You need to recommend a solution that resolves the current file server issue. The solution must meet the business requirements. What should you include in the recommendation? A. Distributed File System (DFS) B. BranchCache in distributed cache mode C. BranchCache in hosted cache mode D. A storage pool Answer: A Explanation: Scenarios for Using DFS By using from DFS-N and DFS Replication, your organization can benefit from several implementation scenarios including: Sharing files across branch offices Data collection Data distribution Sharing Files Across Branch Offices Organizations with multiple physical offices tend to share files or collaborate between offices. You can use DFS Replication to replicate files between these offices, or from branch offices to a hub site. This form of replication helps reduce wide area network (WAN) traffic, and provides high availability should a WAN link or a server fail. DFS Replication ensures that when changes are made to a file, the changes are replicated to all other sites by using delta replication. QUESTION 57 You need to create a service template for the web servers used by the CRM application. What should you include in the service template? A. A VIP template B. A host profile C. Guest OS profile D. A capability profile Answer: A Explanation:

Overview	Existing Environment Network Infrastructure
The company plans to implement the following changes: <ul style="list-style-type: none"> <li>Replace all of the domain controllers with new servers that run Windows Server 2012.</li> <li>Upgrade the CRM application to use a web-based application that connects to the current CRM database.</li> <li>The web application will store session data in the memory of each web server.</li> <li>Initially, deploy two front-end web servers to two virtual machines. Additional virtual web servers will be deployed in the future.</li> <li>Monitor the availability of the CRM application and create alerts when the overall availability is less than 99 percent.</li> <li>Implement Microsoft System Center 2012 to manage the new environment.</li> </ul>	

Business Requirements	Technical Requirements	Virtualization Requirements	All
The company identifies the following virtualization requirements: <ul style="list-style-type: none"> <li>Minimize the number of permissions and privileges assigned to users.</li> <li>Ensure that the members of a group named Group2 can add a WSUS server to the fabric.</li> <li>Ensure that a diagram view of the virtualization environment can be generated dynamically.</li> <li>Minimize the amount of administrative effort required to manage the virtualization environment.</li> <li>Prevent the failure of a front-end web server from affecting the availability of the CRM application.</li> <li>Ensure that the members of a group named Group1 can create new virtual machines in the Los Angeles office only.</li> <li>Only create virtual machine templates by using objects that already exist in the System Center 2012 Virtual Machine Manager (VMM) library.</li> <li>On the failover cluster in the main office, apply limited distribution release (LDR) updates to the virtualization hosts without disrupting the virtual machines hosted on the virtualization hosts.</li> </ul>			

Updated: September 10, 2012

Applies To: System Center 2012 - Virtual Machine Manager, System Center 2012 SP1 - Virtual Machine Manager

[This topic is pre-release documentation and is subject to change in future releases. Blank topics are included as placeholders.]

You can use the following procedure to create a virtual IP (VIP) template for a hardware load balancer. A virtual IP template contains load balancer-related configuration settings for a particular type of network. For example, you could create a template that specifies the load balancing behavior for HTTP traffic on a specific hardware load balancer manufacturer and model. These templates represent the best practices from a load balancer configuration standpoint.

**Note**

For information about how to create a virtual IP template for Microsoft Network Load Balancing (NLB), see [How to Create VIP Templates for Network Load Balancing \(NLB\) in VMM](#).

<http://technet.microsoft.com/library/gg610569.aspx> QUESTION 58 You need to recommend a solution that meets the technical requirements for DHCP. What should you include in the recommendation for each office? A. Network Load Balancing (NLB) B. DHCP failover C. DHCP server policies D. IP Address Management (IPAM) Answer: B Explanation:

Business Requirements	Technical Requirements
	The company identifies the following technical requirements:
	Provide a highly available DHCP solution.
	Maintain a central database that records the security events.
	Ensure that an administrator in the main office can manage third-party applications for all of the users.
	Ensure that all of the domain controllers have the ReliableTime service installed.
	Configure the registry value HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\Tcpip\Parameters\ DhcpServerName to the main office IP address.

New functionality in DHCP Server for Windows Server 2012 includes the following.

- **DHCP failover:** This feature provides the ability to have two DHCP servers serve IP addresses and option configuration to the same subset of clients, providing for continuous availability of DHCP service to clients. The two DHCP servers replicate lease information between them, allowing one server to assume responsibility for servicing of clients for the entire subnet when the other server is unavailable. It is also possible to configure failover in a load-balancing configuration with client requests distributed between the two servers in a failover relationship. For more information about **DHCP failover**, see [Step-by-Step: Configure DHCP for Failover](#).

<http://technet.microsoft.com/en-us/library/jj200226.aspx> QUESTION 59 You need to recommend a solution for deploying the web servers for the CRM application. The solution must meet the visualization requirements. What should you include in the recommendation? A. Network Load Balancing (NLB) without affinity B. Failover Clustering with one active node C. Failover Clustering with two active nodes D. Network Load Balancing (NLB) with client affinity Answer: D Explanation:

Business Requirements	Technical Requirements
	The company identifies the following visualization requirements:
	Minimize the number of permissions and privileges assigned to users.
	Ensure that the members of a group named Administrators can view the virtualization console.
	Minimize the amount of administrative effort.
	Prevent the failure of a front-end web server farm.
	Ensure that the members of a group named Administrators can view the virtualization console.
	Only create virtual machine templates by using System Center 2012 Virtual Machine Manager (VMM) library.
	On the failover cluster in the main office, apply the virtual machine templates to the virtual machines hosted on the secondary office.

<http://technet.microsoft.com/library/hh831698> QUESTION 60 You need to recommend a solution that manages the security events. The solution must meet the technical requirements. Which configuration should you include in the recommendation? A. Object access auditing by using a Group Policy object (GPO) B. Event rules by using System Center 2012 Operations Manager C. Event forwarding by using Event Viewer D. Audit Collection Services (ACS) by using System Center 2012 Answer: D
