

## Official 2014 Free Microsoft 70-158 Questions Sharing(11-20)!

**QUESTION 11** You administer a Forefront Identity Management (FIM) 2010 server in your company network. Resource Control Display Configuration (RCDC) XML files are used to control end-user UI elements. End users report that incorrect integer values appear in read-only Numeric Box elements. Some users can edit this field. You need to ensure that users can submit valid form data by using the Numeric Box element. What should you do? A. Include the `<xsd:attribute ref="my:AutoValidate"/>` line within the RCDC Panel element. B. Set the `MinValue` property on the `UocNumericBox` element. C. Set the `DefaultValue` property to the correct integer value on the `UocNumericBox` element. D. Set the `Value` property to the correct integer value on the `UocNumericBox` element. Answer: C

**QUESTION 12** Drag and Drop Question This type of question asks you to indicate the correct answer by building an answer list. In a Drag and Drop question you need to build a list by dragging the appropriate source objects to the answer list, and then place them in the correct order based on criteria defined in the question. To set your answer Drag the source object from the source area to the answer list. The source object is removed from the source area and is added to the answer list relative to the cursor location. Click the source object to select it, and then click the button. The source object is removed from the source area and is added to the bottom of the answer list. The button is unavailable after all source objects are moved to the answer list. To reorder objects in the answer list Drag the object to the correct location in the answer list. Click an object to select it, and then click the and buttons to move the object. The and buttons might be unavailable based on the location of the currently selected object. To remove an object from the answer list Drag the object from the answer list to the source area. The object is returned to the source area. Select the object, and then press the Delete key. The object is returned to the source area. Click the object to select it, and then click the button. The object is returned to the source area. The button is unavailable until the first source object is added to the answer list. To remove all objects from the answer list Click the Reset button. Notes Note the following considerations when answering this type of question: - You might need to use the scroll bar to view the entire contents of the question. - You might need to use the scroll bar to view the entire contents of the panes in the work area. - You can use the splitter bars to resize the panes. - Your company network contains Forefront Identity Manager (FIM) 2010. - You need to create a new search scope for All Computers in the FIM Portal Administration. - You also need to ensure that the search scope appears at the top of the list of search scopes. What should you do? (To answer, move the appropriate action from the list of actions to the answer area and arrange them in the correct order.) A. Run `iisreset.exe`. B. From FIM Portal Configuration, set the Search Scope Order setting to 1. C. From FIM Portal Configuration, set the Search Scope Order setting to 99. D. From FIM Portal Configuration, set the Global Cache Duration setting to 0. E. From FIM Portal Configuration, set the Navigation Bar Resource Count Cache Duration setting to 0. F. From the FIM Portal navigation bar, create a new Security Group that matches the resource type of Computer. Answer: F BEFORE B) (B BEFORE A) A

**QUESTION 13** You deploy Forefront Identity Manager (FIM) 2010 in your company network. You need to allow non-administrators to view Security Groups in the FIM Portal navigation bar. What should you do? A. From Navigation Bar Resources, click Security Groups and set Order to 0. B. From Navigation Bar Resources, click Security Groups and set Parent Order to 0. C. From Navigation Bar Resources, click Security Groups and set Usage Keyword to BasicUI. D. Create a new Management Policy Rule that provides the read permission to non-administrators to the All Security Groups resource. Answer: C

**QUESTION 14** You administer a Forefront Identity Manager (FIM) 2010 server in your company network. You need to add the company logo to the top of the FIM Password Reset Portal page. What should you do? A. From FIM Portal Configuration, on the Extended Attributes tab, set the Branding Left Image attribute to the logo file path. B. From FIM Portal Configuration, on the Extended Attributes tab, set the Branding Center Text attribute to the logo file path. C. In the `web.config` file, modify the `<add key="PasswordPortalBrandingBarCenterText" value="" />` line. D. In the `web.config` file, modify the `<add key="PasswordPortalBrandingBarRightImageUrl" value="" />` line. Answer: D

**QUESTION 15** Drag and Drop Question This type of question asks you to indicate the correct answer by building an answer list. In a Drag and Drop question you need to build a list by dragging the appropriate source objects to the answer list, and then place them in the correct order based on criteria defined in the question. To set your answer Drag the source object from the source area to the answer list. The source object is removed from the source area and is added to the answer list relative to the cursor location. Click the source object to select it, and then click the button. The source object is removed from the source area and is added to the bottom of the answer list. The button is unavailable after all source objects are moved to the answer list. To reorder objects in the answer list Drag the object to the correct location in the answer list. Click an object to select it, and then click the and buttons to move the object. The and buttons might be unavailable based on the location of the currently selected object. To remove an object from the answer list Drag the object from the answer list to the source area. The object is returned to the source area. Select the object, and then press the Delete key. The object is returned to the source area. Click the object to select it, and then click the button. The object is returned to

the source area. The button is unavailable until the first source object is added to the answer list. To remove all objects from the answer list. Click the Reset button. Notes Note the following considerations when answering this type of question: You might need to use the scroll bar to view the entire contents of the question. You might need to use the scroll bar to view the entire contents of the panes in the work area. You can use the splitter bars to resize the panes. Your company network contains Forefront Identity Manager (FIM) 2010. You need to create a new search scope for All Computers in the FIM Portal Administration. You also need to ensure that the search scope appears at the top of the list of search scopes. What should you do? (To answer, move the appropriate action from the list of actions to the answer area and arrange them in the correct order.) A. Run iisreset.exe. B. Refresh the schema. C. Create an inbound synchronization rule by using the new metaverse object. D. Add the new object to the ObjectTypeDescription extended attribute of the synchronization filter. E. Add the inbound synchronization rule to the Detected Rules List attribute of the synchronization filter. Answer: D BEFORE B

QUESTION 16 You use Forefront Identity Manager (FIM) 2010 in your company network. You create a new resource type in the FIM Portal that supports a third-party web application. You need to mark the new resource type in the FIM Portal as essential for the third-party application. What should you do? A. Add a custom Usage Keyword in the Advanced View of the resource types. B. Use the Microsoft.ResourceManagement.WebServices Usage Keyword for the resource types. C. Create a custom attribute, and then bind the custom attribute to the resource types. D. Create an indexed string attribute that can be searched by the third-party application, and then bind the indexed string attribute to the resource types. Answer: A

QUESTION 17 Your company network includes Forefront Identity Manager (FIM) 2010. Your company uses many custom attributes bound to resource types. One custom attribute is an integer type bound to multiple resource types requiring validation of different ranges of values. The attribute must ensure that valid data is entered for the new integer type attribute. You need to extend the schema of the FIM Portal to validate integer data entry. What should you do? A. Set the minimum and maximum integer values on the validation page of the new attribute. B. Set the minimum and maximum integer values on the validation page of the attribute binding configuration. C. Set String Pattern to match a regular expression of the Integer data type. D. Set String Pattern to match a regular expression of the Indexed String data type. E. Run iisreset.exe. Answer: B

QUESTION 18 Your company network includes Forefront Identity Manager (FIM) 2010. The Self-Service Password Reset and Registration feature is configured. From the FIM Portal, you create a set of help desk users and a set of lockout gate registration resources. You create the following Management Policy Rules (MPRs): Grant the Modify permission to help desk users to the attributes of the lockout gate restrictions. Grant the Read permission to help desk users to the Password Reset Users set. You need to ensure that help desk users can manage users that are locked out of the Password Reset feature. What should you do? A. Create a new Password Reset Users set. B. Configure the existing MPR to grant the Modify permission to the Password Reset Users set. C. Create an MPR that enables the Operation type to Create resource and Add a value to a multivalued attribute for the Lockout Gate Registration Ids and AuthN Workflow Locked Out Resource attributes. D. Create an MPR that enables the Operation type to Read resource and Remove a value from a multivalued attribute for the Lockout Gate Registration Ids and AuthN Workflow Locked Out Resource attributes. Answer: D

QUESTION 19 You administer a Forefront Identity Management (FIM) 2010 server in your company network. You need to force domain users to reset their QA Gate answers. What should you do? A. Select the Require Re-Registration option for Password Reset AuthN Workflow. B. Select the Run On Policy Update option in the Extended Attributes of Password Reset AuthN Workflow. C. Remove the AuthN Workflow GUIDs from the User.AuthNWFRegistered attribute. D. Register the System Workflow Required for Registration workflow. Answer: A

QUESTION 20 Your company network includes Forefront Identity Manager (FIM) 2010 and Active Directory Domain Services (AD DS). All hotfixes have been applied to FIM 2010. FIM and AD DS servers run Windows Server 2008. The FIM Self-Service Password Reset feature is configured. You need to ensure that the password history setting of the FIM Self-Service Password Reset configuration matches the password history setting of the AD DS domain. What should you do? (Choose all that apply.) A. Upgrade the FIM servers to Windows Server 2008 R2. B. Upgrade the domain controllers to Windows Server 2008 R2. C. Set the ADMAEnforcePasswordPolicy=1 registry value in the registry. D. Configure a fine-grained password policy for FIM user accounts in Active Directory. E. Enable LDAP over SSL communication between the FIM Synchronization Service and domain controller. Answer: BCE
